The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 21-28 and 30-40 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. There is nothing in the disclosure to determine the metes and bounds of the terms “dispensing unit” and “releasing mechanism” of claim 21, lines 4-5.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 21,23-25,34 and 40 are rejected under 35 U.S.C. 102(b) as being anticipated by Huang

See Fig. 4, where claims 21 and 40 are met by the dispensing unit seen at 2, cartridge at 1', housing at 1 and attachment mechanism at 8. The claim 23 plug is seen at 6, and is bi-directional as set forth in claim 24. The fitting of claim 25 is seen to fit around the tank surface. The claim 34 “securing mechanism” is met by the surface of 1 on which 1' rests.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 28 is rejected under 35 U.S.C. 103(a) as being unpatentable over Huang, as applied *supra*, in view of Hall.

To provide for the inlet 12 of the former to be mounted through the cover as taught by Hall would have been obvious to the ordinary artisan as the two would have constituted obvious alternative equivalent mounting schemes, both shown used in similar art devices.

Claim 29 stands withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected species, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 10/26/05.

Claims 22,26,27,30-33 and 35-39 define over the art.
